Jebel Ali Hills Inventory Map - practical guide for agents and admins

This guide explains how to use the live map, filter plots, read plot popups, switch language, check recent updates, and export/update data safely.

Main task	Where to click	Result
Find a plot	Search box	Search by GIS plot, master-plan plot, agent, or mobile.
Filter inventory	Filter tabs	Choose agents, statuses, types, features, phases, GFA, or pricing.
Read details	Click a pin	The popup shows plot fields and copy buttons.
Arabic view	Arabic button	Common tabs, labels, buttons, and field names switch to Arabic.
Recent changes	What changed	A hidden panel opens with the latest updates.

1. Agent daily workflow

- Open the Agent map link and wait until the pins and master-plan overlay load.
- Use the search box for quick lookup by GIS number, master-plan number, agent name, or mobile number.
- Use filters to narrow results. Multiple selected values inside the same tab act as OR. Different filter tabs act as AND.
- Click a pin to open its popup. Use the copy buttons to send clean details or descriptions to clients or other agents.
- Press What changed only when you want to see the latest updates. If you do not press it, the normal map view stays clean.

2. Filters and tabs

- All agents - filter by main agent or second agent.
- All statuses - filter by plot status or color such as Red, Blue, or Pink.
- All types - filter by Plot, Building, Ready Building, Ready Villa, Twin Villa, and related types.
- All features - filter by Corner, Single Row, Back to Back, Park Facing, Green Belt Facing, End Unit, and similar features.
- All phases - choose one or more phases at the same time.
- All GFA - filter G+1, G+4, or other GFA values.
- All pricing - switch between priced and unpriced records.
- All button - ticks every choice in that tab. Clear button - removes all ticks. The map refreshes immediately after either button.

3. Language switch

- The Arabic button switches the user interface between English and Arabic.
- Arabic mode translates common tabs, field labels, buttons, placeholders, status names, type names, and feature names.
- Plot numbers, PA numbers, coordinates, prices, mobile numbers, and agent names stay unchanged to avoid mistakes.
- Press English to return to the English interface.

4. Plot popup and display labels

- The Display Labels controls decide what is shown around the pin on the map.
- The Details Checklist decides which fields are shown in the popup and copy output.
- When you change details/display checkboxes, the open popup refreshes without needing to close and reopen the plot.
- Last Date Updated is a dedicated field and can be shown as a display label.

5. Admin add/edit workflow

- Use Admin map only for editing. The Agent map is view-only.
- Click an existing plot pin to edit, or use the + Add badge on master-plan labels to create an inventory record.
- Last Date Updated defaults to today when editing/saving unless you manually change it.
- Use GFA allowed override only for special plots that do not follow the normal calculation.
- After edits, export updated map data so the latest data can be pushed to GitHub.

6. Update log button

- The What changed button opens a panel with the latest map-data update and feature changes.
- The panel is hidden by default. Agents only see it when they press the button.
- The latest data update currently shows added, removed, and changed records plus PA label coordinate updates.
- Future updates should append a new entry so agents can understand what changed without searching through messages.

7. Export and deployment safety

- Normal price/name/status changes should be sent as updated map data files.
- Feature or design changes should be sent as the full website package.
- After GitHub deployment, wait one to two minutes, then use a hard refresh before testing.
- If a filter or popup looks wrong, first hard refresh, then test in a private window to avoid old browser cache.

8. Common issues

- Old tab style still visible: usually browser cache. Hard refresh or open a private window.
- A filter looks empty: there may be no matching values in the current data. Clear filters and search again.
- All and Clear seem similar: All ticks every option; Clear removes all ticks. Both can show a broad map result.
- Arabic does not apply immediately: dynamic content may have loaded after the switch. Wait a second or press Arabic/English again.
- Latest change not visible: GitHub Pages may not have deployed yet. Wait and refresh; check deployment status.

Important: Keep plot numbers, PA numbers, agent names, mobile numbers, prices, and coordinates exact when copying or sharing. The language switch is only for user-interface labels.
